Summary

Azure-focused DevOps graduate with hands-on experience in cloud infrastructure, CI/CD, containerization, and automation through practical labs. Strong foundation in Linux and networking with the ability to deploy, monitor, and manage scalable applications on Azure.

Technical Skills

Azure Services: Virtual Machines, VNet, Subnets, NSG, Load Balancer, Azure DNS
Containers & Orchestration: Docker, Kubernetes, Azure Kubernetes Service (AKS)
CI/CD: Azure DevOps (Pipelines, Repos), GitHub Actions, Jenkins
Infrastructure as Code: Terraform, ARM Templates (basic)
Monitoring: Azure Monitor, Prometheus, Grafana
Security: Azure Key Vault, RBAC, Basic IAM
Storage: Azure Blob Storage, File Storage
Scripting: Bash, PowerShell, basic Python
Systems: Linux (strong foundation), Windows Server
Networking: TCP/IP, DNS, VPN, Load Balancing

Projects

End-to-End CI/CD Pipeline (Azure DevOps + Docker)

- Built CI/CD pipelines using Azure DevOps to automate build and deployment workflows.
- Reduced manual deployment effort by **40%** through automation.

Application Deployment on AKS

- Deployed containerized applications on Azure Kubernetes Service (AKS).
- Configured scaling, rolling updates, and service exposure.

Infrastructure Automation using Terraform (Azure)

- Provisioned Azure resources (VMs, networking, storage) using Terraform.
- Improved infrastructure consistency and reduced provisioning time.

Monitoring & Logging Setup

- Implemented monitoring using Azure Monitor, Prometheus, and Grafana dashboards.
- Enabled proactive issue detection and system performance tracking.

Certifications

KodeKloud – 100 Days of Cloud (Azure, AWS, Docker, Kubernetes)
CCNA Training (Networking Fundamentals)
Red Hat (RHEL) Training – Linux Administration

Education

Bachelor of Science in Information Technology

2025
